

I.

1. My name: Chen Bai. Partner: Luke Jiang

2. I think the project is cool. I cannot say I enjoy it, because I had a poor understanding and implementation skill on the recursion, but I do feel exciting when all the tests are passed.

3. I think the spec on website is not as clear as possible. It would be better to give more examples on how toDouble and Simplify actually work together to achieve a complex equation. Like, give a complete example explaining when to use toDouble and when to use Simplify in order to solve $a(5 + 6) + (7 - a)$.

II.

1. For part 1, I worked on ArrayDictionary, and he worked on DoubleLinkedList. We worked together on the tests.

For part 2, I worked on Group write-up and plot method. He did toDouble and Simplify methods. We have tried pair programming.

2. My partnership is ok, we think contribute evenly.
